

QuniPa

LOGO GUIDELINES

Version 1.0 · October 2026

One system, two voices

1. **Two-colour ring**
   Orange on the left, blue on the right: two halves of one circle, as in the draft.
2. **Four nodes**
   Hollow rings set into the gaps, one at each cardinal point. Their colours alternate (blue top and right, orange bottom and left).
3. **Inner arcs**
   A point-symmetric pair that occupies the two quadrants the monogram leaves free.
4. **qp monogram**
   The two initials, staggered along the diagonal and separated by a narrow central seam.
5. **Initials in colour**
   The wordmark's q and P are built exactly like the monogram's: one bowl, one stem.
6. **Neutral letters**
   u, n, i, a are set in Audiowide, in Ink, so the two custom-drawn initials lead.

The meaning of the name and the concept itself are unchanged from the draft; this document describes form only.

Clear space and minimum size

Keep a clear margin of x on every side, where x is the outer diameter of one emblem node (about one sixth of the emblem's height). For the wordmark on its own, x equals the x-height of the letters u n i a. Nothing other than the background may enter this zone.

MINIMUM SIZES

Version	Print	Screen
Horizontal	38 mm wide	170 px wide
Horizontal + descriptor	50 mm wide	230 px wide
Stacked	22 mm wide	95 px wide
Wordmark only	22 mm wide	90 px wide
Emblem (full)	12 mm	48 px
Emblem (compact)	6 mm	24 px
Monogram qp	4 mm	16 px

Below its minimum, switch to a smaller version rather than shrinking further: horizontal → stacked → full emblem → compact emblem → monogram. Minimums were set by rendering each version at real pixel sizes and checking that the i-dot, node openings and the thin letters stay distinct.

VERSIONS FOR SMALL SIZES

Full emblem · Compact · Monogram

The compact emblem drops the inner arcs and thickens the ring and nodes. The monogram is for favicons and other very small marks.

Palette and specifications

QuniPa Blue

HEX	#0A5CB8
RGB	10 92 184
CMYK	C95 M60 Y0 K0
Grayscale	K 85 %
On white contrast	6.5 : 1

QuniPa Orange

HEX	#D95A0B
RGB	217 90 11
CMYK	C0 M75 Y100 K10
Grayscale	K 65 %
On white contrast	3.9 : 1

QuniPa Ink

HEX	#232A33
RGB	35 42 51
CMYK	C50 M35 Y25 K90
Grayscale	K 95 %
On white contrast	14.5 : 1

FOR DARK BACKGROUNDS

Night (background)

#0F1720 15 23 32

Blue on dark

#4DA3FF 77 163 255
contrast on Night 6.9 : 1

Orange on dark

#FF8A3D 255 138 61
contrast on Night 7.7 : 1

Paper (letters)

#F3F5F8 243 245 248
contrast on Night 16.5 : 1

Orange is a graphic colour: at 3.9 : 1 on white it suits the large initials, but should not be used for body text. Use Ink or Blue for text. Blue and orange are a hue-opposed pair, which is generally robust for common forms of colour-vision deficiency (not formally simulated here); in grayscale the two halves still separate (K 85 vs K 65). CMYK builds were derived with the FOGRA39 (coated) profile, relative colorimetric with black-point compensation, then rounded to 5 %. Blue is slightly less saturated in print because it sits at the edge of the CMYK gamut. Always proof, and match to a physical swatch book if exact brand colour is critical. No spot-colour (Pantone) equivalents are specified.

COLOUR VARIANTS every version is supplied in each

Full colour

Colour, for dark

Grayscale

Gray, for dark

Black

White

Use full colour on white or very light backgrounds. On dark backgrounds use the “for dark” variants (recommended background: Night #0F1720, or any dark of similar depth). On photographs or coloured backgrounds use black or white, whichever contrasts more. Grayscale is for documents printed without colour; black and white are for one-colour jobs, engraving, stamps and embroidery.

Lettering and typeface

The wordmark combines two sources. The initials q and P are custom-drawn (one bowl, one stem, the same construction as the emblem's monogram). The letters u, n, i and a are Audiowide Regular (SIL Open Font License), converted to outlines and scaled to a 42-unit x-height. The wordmark is supplied as outlined artwork, so no font needs to be installed. Reproduce it only from the supplied files and never retype it.

The descriptor text "RESEARCH GROUP" is a placeholder; edit it in build_logo.py or ask for a custom line.

COMPANION TYPEFACE (descriptor and text)

IBM Plex Sans

Regular · Medium · SemiBold

Used for the optional "Research Group" descriptor (Medium, capitals, letter-spaced to the width of the wordmark) and recommended for headings, slides and posters so that text sits comfortably beside the logo. Licence: SIL Open Font License 1.1: free for any use, including embedding, with no restrictions on documents or web. Download: github.com/IBM/plex.

Where Plex is unavailable (for example, a colleague's PowerPoint), fall back to Arial or Helvetica. Do not substitute a rounded or decorative face.

Aa Bb Qq Pp 0123

The quick brown fox jumps over the lazy dog.

RESEARCH GROUP

Descriptor: Plex Medium, capitals, +0.31 em tracking (fitted to the wordmark width).

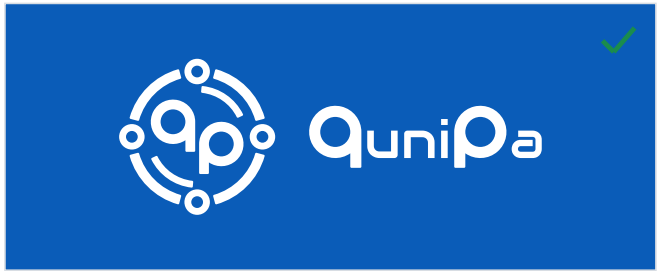

Use it as supplied

On white or light backgrounds: full colour.

On dark backgrounds: the “for dark” variant.

On colour or photographs: white (or black).

Don’t stretch, squash or skew.

Don’t recolour, or swap orange and blue.

Don’t rotate or tilt.

Don’t add shadows, outlines, glows or gradients.

Don’t place full colour on low-contrast backgrounds.

Don’t retype the name or rebuild the lockup.

From draft to final: what changed and why

DRAFT

REFINED

Weights. Seven different stroke weights (≈6 to 17.7) in the draft were brought into one system for the emblem and the custom initials. Audiowide's lighter strokes are the exception.

Knock-outs. The node centres were filled with white, so the logo failed on dark or coloured backgrounds. They are now true openings.

Clearances. The ring gaps around the nodes were tight (≈3 units) and uneven. Every arc end now sits exactly the same distance from its node.

Symmetry. The two inner arcs started and ended at different angles. They are now an exact 180° pair, concentric with the ring.

Central seam. The q and p stems nearly touched (≈3 units), creating tension. The gap is now a deliberate seam, and the stagger equals one bowl radius.

Reading. Very short stems made the emblem's q easy to misread as "a". Tails are longer, so q and p are unambiguous.

Baseline. The big bowls hung about 11 units below the small letters' baseline without aligning to anything. They now sit on it, with stems descending evenly.

u n i a. Your original "a" had a distinctive slit-and-rounded-end form that none of my own redraws kept. u, n, i and a are now Audiowide, whose "a" is the closest free match.

Details. Letter spacing was re-set optically for the new letters, and colours were tuned slightly for contrast.

Production. Live strokes and nested scaled groups became clean outlines; added dark, mono, compact and small-size versions.
